• Effects of overexposure to:

Antimony trioxide	Warning! Cancer suspect agent. May cause eye and skin irritation. May cause respiratory and digestive tract irritation. May cause cardiac disturbances. May cause lung damage. May cause dermatitis. May cause cancer in humans. May cause blood abnormalities. Target Organs: Heart, lungs.
Barium Sulfate	TLV and PEL are for Total dust/Respirable fraction. May cause mechanical irritation of eyes or in great concentration overloading of the respiratory system. Lungs may be affected by repeated or prolonged exposure to dust particles, resulting in baritosis (a form of benign pneumoconiosis). Reacts violently with aluminium powder.
Copper	TLV and PEL as dust and mists. Warning! Causes respiratory tract irritation. May cause lung damage. May cause liver and kidney damage. Causes eye and skin irritation. Inhalation of fumes may cause metal-fume fever. Can be explosive when exposed to heat or flames. May cause digestive tract irritation with nausea, vomiting, and diarrhea. Target Organs: Kidneys, liver, lungs.
Nickel metal and insoluble compounds	*respiratory fraction. This product is the result of high temperature calcination of the component substances. Due to its unique crystalline structure the properties of this product do not necessarily reflect the properties of the component metals or oxides.
T-Glycid-T-Cyanurate (TGIC)	Warning! Severe eye irritant. Toxic by ingestion or if inhaled. May cause dermatitis and sensitization. Can cause effects on the male reproduction system.
